

Cover letter

Dear Professor Dr. Tahir Yaqub,

This is a cover letter regarding the manuscript “Isolation and antimicrobial susceptibility of gram negative rods isolated from urinary tract infections in different hospitals of Lahore city, Pakistan” written by Abid Sarwar, Sohail Aslam and Muhammad Asif Habeeb.

Few data is available on etiological agents of urinary tract infections (UTI) in different hospitals of Lahore City of Pakistan and we believe this study will fills the gap in the current knowledge of prevalence of pathogens involved in urinary tract infections in this region of Pakistan. The urine samples collected from a number of patients suspected for UTI have been characterized microbiologically and biochemically. Moreover we also tried to measure the antimicrobial resistance against various antibiotics which are usually advised in such infections.

We believe that these findings could be of interest to readers of Journal of Infection and Molecular Biology, and could help physicians in therapeutics. We thank you in advance for considering our submission and for your invaluable time to review the article critically.

On the behalf of co-authors – Best regards

Muhammad Asif Habeeb
