About the Book

This book is intended to share scientific knowledge and expertise of/to the community in the field of agriculture, especially relating to biopesticides. The book provides citations and reviews of more than 1000 recent publications in the field of biopesticide research, and recommendations for future areas of new vistas of research in the field of biopesticides. The book also provides methodologies and technologies for isolation and chemical characterization of biomolecules, diagnostic tools for microbes, analytical techniques for phytochemicals and nanomaterials, and protocols for bioassays and field studies. For the better understanding of the readers, this book includes more than 73 tables, 60 figures and 28 colour plates.

The entire book is divided into four sections, and chapters in each section highlight a dedicated aspect of agricultural pests/pathogens and biotechnological options for insect pest management viz., entomopathogens, botanical pesticides, natural enemies, bionanomaterials and other IPM components. It also discusses about the impact, advantages, limitations and future prospects of these biotechnological options.

Each chapter is attempted to make as stand-alone document, making it a valuable reference source for Agrarians, field practitioners, biologists, scientists in related fields and agriculture school libraries.

About Editors

K. Sahayaraj, Ph.D. is a Professor (Associate) at the Department of Zoology, St. Xavier's College of Manonmaniam Sundaranar University and a Director in the Crop Protection Research Centre in the same institution since the June 1998. Over the past 28 years, Dr. Sahayaraj's research efforts have been dedicated to multidisciplinary, integrated approaches to understanding how reduviids distribute and diversify in various ecosystems, and how their adaptive characters can be applied to pest management, especially through bio-intensive pest management. Dr. Sahayaraj has over 198 scientific papers and projects published. He is an internationally recognized expert in many areas of advanced entomology including insect chemical ecology, artificial diet formulation, biopesticide formulation, bio-intensive integrated pest management, bionanomaterial, and insect molecular biology. He is a regularly sought after and requested lecturer at the majority of science colleges at Tamil Nadu, India. Dr. Sahayaraj organized four international conferences (BIOCICON) and seven more national conferences. Dr. Sahayaraj is the Managing Editor of the Journal of Biopesticides, Editor for more than 10 reputed journals. Reviewer of more than 15 journals, particularly Entomotropica, journal of Insects, Pest Management Sciences, Pesticide Biochemistry and Phytochemistry, Photobiology B: Biology etc. Recent publications of Dr. Sahayaraj deals with essential oils, seaweeds, reduviid predators, fungi for pest management; culture, bioefficacy and venom biochemistry of reduviid predators; bionanomaterial synthesis, characterization and biological application. He has been honored with several awards from regional (Best Researcher in Science, St. Xavier's College), national (Scientists of the year-2008, NESA, New Delhi; Young Achievers Award-2010 by SADHNA, Solan; Bharat Seva Ratan Gold Medal Award-2014 by GEPR, New Delhi; Bharat Seven Rethan Gold Medal by GEPBRA, New Delhi) and international agencies (Hyoshi Environmentalist Award, Japan; YOUNG IOBC travel grant awardee). Dr. Sahayaraj has operated thirteen research projects funded by national (DST, DBT, CSIR, MOEs, MEFs) and international (IFS) funding agencies. He has also received grants on several occasions for conducting farmers' and students' training programmes and international conference on Biopesticides and international travel grant from TWAS, CSIR, DST, TNSCST, MES, ICMR, ICAR and UGC. He has guided and supervised 18 Ph.D. scholars and supervising two researchers. He has been regularly transferring the laboratory finding to the neighborhood farmers and offering guidance to them on BIPM. For a better understanding and pursuance by farmers, he brought out 05 manuals/books in his regional language.

Dr. P. Selvaraj, Ph.D. in applied entomology at Manonmaniam Sundaranar University, Tirunelveli, Tamil Nadu, India (2001-2003). Then he joined as Scientist in Sun Agro Biotech Research Centre, Chennai (2004 to 2008) headed by the eminent Entomologist Dr. Dr. B. Vasantharaj David wherein he undertook research and development activities on biofertilizers and biopesticides including entomopathogens, Azadirachtin formulations, Pheromones based trapping systems etc. and preparation of reports for pesticide registration with CIB, New Delhi. He was also involved in Collaborative research on insect pests and their parasitoids in collaboration with USDA (with three different Research groups viz. Australia, USA and France) and ICIPE, Kenya. During his career he underwent two training programmes at ICIPE, Nairobi, Kenya in 2005 and visited HORDI Sri Lanka as visiting scientist to establishing Mango fruit fly parasitoid research station at HORDI for AFI, ICIPE, Kenya. He was appointed Assistant Professor in the Department of Advanced Zoology and Animal Biotechnology, St. Xavier's College, Palayamkottai, from May, 2008. So far has 37 research publications including 6 International and 12 National Journals, 3 books chapters and 2 books and 2 training manuals. He is actively involved in organizing seminars/conferences and training programmes for both national and international participants; reviewing articles and publishing books and Journals.

Table of Contents

Section A: Entomopathogens for Insect Pest Management

Chapter 1. Biotechnological options for the management of insect pests in agriculture

P. Selvaraj and K. Sahayaraj, St. Xavier's College, Palayamkottai-627002, Tamil Nadu, India

Abstract

Keywords

1.1. Introduction

1.2. Botanical formulations and target pests

1.2.1 Commercial products

1.2.3. Vegetable arthropod pests

1.2.4. Fruit crops

1.2.5. Greenhouse applications

1.3. Zooid pesticides

1.4. Entomopathogens

1.4.1. Trade names

1.4.1.1. Bacteria

1.4.1.2. Viruses

1.4.1.3. Fungi

1.5. Insect natural enemies

1.6. Post-harvest

1.7. Semiochemicals and target pests

1.8. Transgenic crops

1.10. Advantages of using Biopesticides

1.11. Limitations

1.12. Conclusion and future recommendations

1.13. References

Chapter 2. Bioprotectant with multifunctional microorganisms: A new dimension in plant protection

Lalithakumari Janarthanam

Abstract

Keywords

2.1. Introduction

2.2. Methodology followed

2.2.1. 14S rRNA Gene Amplification, Sequencing, and Analysis

2.2.2. Construction of multifunctional microbial formulation

2.2.3. Test for root nodulation in selected leguminous plants.-Growth tubes

2.2.4. Green House experiments

2.3. Observations and discussions

2.3.1. Rhizobial as well as the non-rhizobial

2.3.2. Bacterial-bacterial combinations and bacterial-fungal combinations

- 2.3.3.. Nodulation efficiency
- 2.3.4. Screen house findings
 - 2.3.4.1.Corn
 - 2.3.4.2.Peanut
 - 2.3.4.3.Soybean
 - 2.3.4.4.SumaGrow-F2 a free-living nitrogen fixers and biocontrol agents
- 2.4. Conclusion
- 2.5. References

Chapter 3. Growth kinetics and pathogenicity of *Paecilomyces fumosoroseus* isolates against *Bemisia tabaci* Grennadius (Homoptera:Aleyrodidae)

J. S. Matthew and A. Khan

Abstract

Keywords

3.1.Introduction

- 3.1.1. Whitefly
- 3.1.2. Biocontrol agents for Whiteflies
 - 3.1.2.1. Natural enemies
 - 3.1.2.2. *Paecilomyces fumosoroseus*
 - 3.1.2.3. *Paecilomyces fumosoroseus* efficacy modulation

3.2. Preparation and application of entomopathogenic fungus

- 3.2.1. Fungal Isolation
- 3.2.2.Effect of temperature on in vitro radial colony growth of *P. fumosoroseus*
- 3.2.3.Effect of temperature on pathogenicity of *P. fumosoroseus* on *B. tabaci* adults

3.3. Entomopathogenic fungus impacts against *B. tabaci*

- 3.3.1. Growth and germination
- 3.3.2. LC50 values for *B. tabaci* at different locality and temperatures

3.4. Conclusion

3.5. References

Chapter 4: Efficacy of Entomopathogenic Fungi on Lesser Grain Borer, *Rhyzopertha dominica* (Fab.)

P. Jyothi and N. Sambasiva Rao

Abstract

Keywords

4.1.Introduction

- 4.1.1.Paddy post-harvest pests
- 4.1.2.Lesser grain borer (*Rhyzopertha dominica*)
- 4.1.3. Management
 - 4.1.3.1. Insecticides
 - 4.1.3.2. Recent recommendations
 - 4.1.3.3. Microbes

4.2.Uses of Fungi

- 4.2.1. Preparation of fungal formulation
- 4.2.2. Grain treatment with fungal formulation
- 4.2.3.Collection and rearing of the test insect

4.3. Observations and discussions

- 4.3.1. Effect on adults released
- 4.3.2. Effect on progeny build-up
- 4.3.3. Effect on per cent weight loss

4.4. References

Chapter 5: Application of nematodes for insect pest management

K. Sankari Meena and E. I. Jonathan

Abstract

Keywords

5.1. Introduction

5.1. Entomopathogenic nematodes

5.2. Taxonomic position

5.3. Life cycle of EPN

5.4. Survival of nematode juveniles

5.5. Foraging strategies of EPN

5.6. Attributes of EPN as biocontrol agent against insect pests

5.7. Distribution of EPN

5.8. Biocontrol potential of EPN

5.9. Mass production of EPN

5.10. Factors affecting the application of EPN

5.11. Application of EPN

5.12. Commercial products of EPN

5.13. Application Rates

5.14. Conclusion

5.15. References

Section B: Botanicals in Pest Management

Chapter 6: Green chemicals natural laboratories of sustainable agriculture and ecosystem

C. Rettinassababady, R. Renuka and C. Jeyalakshmi

Abstract

Keywords

6.1. Introduction

6.2. Advantages of Green adjuvants,

6.3. Antimicrobial secondary metabolites of green adjuvants,

6.4. Methods of preparation of plant extract

6.4.1. Plant material

6.4.2. Selection of solvents for extraction

6.4.3. Extraction methods

6.5. Experimental methods for evaluation of efficacy of green adjuvants,

6.6. Role of volatile and essential oils as Green adjuvants,

6.7 Synthesis of Bio-nanoparticles using plant extract,

6.8. Green adjuvants as Antiviral principles (AVP),

6.9. Limitations of green adjuvants

6.10. Conclusion

6.11. References

Chapter 7: Phytochemical extraction and screening

P. Selvaraj

Abstract

Keywords

7.1. Introduction

7.1. 0. Class of Phytochemicals

7.1.1. Alkaloids

7.1.2. Glycosides

7.1.3. Flavonoids

7.1.4. Phenolics

7.1.5. Saponins

7.1.6. Tannins

7.1.7. Terpenes

7.1.8. Anthraquinones

7.1.9. Essential oils

7.1.10. Steroids

7.2. Phytochemical extraction

7.2.1. Plant material

7.3. Methods of extraction

7.5. Phytochemical screening

7.3.1. Extraction procedures

7.4. Phytochemical screening

7.5. Phytochemical estimation

7.5. 1. Alkaloids

7.5. 2. Flavanoids

7.5. 3. Phenols

7.5. 4. Saponins

7.5. 5. Tannins

7.5. 6. Oils

7.5. 7. Essential oils

7.5. 8. Lipids

7.6. Separation procedures

7.7.1. Column chromatography:

7.7.2. Thin layer chromatography

7.8. Identifications

7.8.1. UV-Viz. Spectrophotometer

7.8.2. Gas Chromatography– Mass Spectrum analysis and identification of compounds

7.9. Bioactivity of phytochemicals

7.10. Conclusion

7.11. References

Chapter 8: Medicinal plants: promising tool for the management of postharvest insect pests of maize.

P. Lakshmi Soujanya, J.C. Sekhar and P. Kumar

Abstract

Keywords

8.1. Introduction

8.1.1. Rice weevil

- 8.1.2. Rice weevil management
- 8.2. Botanicals for rice weevil management
 - 8.2.1. Insect Maintenance
 - 8.2.2. Plant material preparation and treatments
 - 8.2.3. Data Analysis
- 8.3. Phytochemistry Ageratum
- 8.4. Mortality and Progeny Emergence due to Ageratum treatment
- 8.5. Ageratum treatment and grain damage
- 8.6. Ageratum treatment and Grain weight loss
- 8.7. Conclusion and Future Trends
- 8.8. References

Chapter 9: Reproductive toxicity of botanicals on insects

K. Sumangala Bhat, K. Vivek

Abstract

Keywords

9.1. Introduction

9.2. Materials and Methods

- 9.2.1. Ovicidal activity
- 9.2.2. Larvicidal activity
- 9.2.3. Oviposition-deterrent activity
- 9.2.4. Chemosterilant activity
- 9.2.5. Mode of action of test sample on insects
- 9.2.6. Mitochondrial preparation
- 9.2.7. Mitochondrial enzyme inhibition studies
- 9.2.8. Determination of protein content

9.3. Results

- 9.3.1. Ovicidal activity
- 9.3.2. Larvicidal activity
- 9.3.3. Oviposition-deterrent activity
- 9.3.4. Chemosterilant activity
- 9.3.5. Mitochondrial enzyme inhibition

9.4. Discussion

9.5. Conclusion

9.6. References

Chapter 10. Biological Efficacy of *Amaranthus viridis* L. leaf extracts against certain agricultural pests and phytopathogens

Pathipati Usha Rani, Yarramreddy Manjunatha and R. S Prakasham

Abstract

Keywords

10.1. Introduction

10.1. Plant bioactive compounds

- 10.1.2. Insect treats in agriculture
- 10.1.3. *Amaranthus viridis*
- 10.1.4. Pestiferous insects

10.2. Biological Efficacy of *Amaranthus viridis* L. leaf extracts

- 10.2.1. Collection and extraction of Plant material

-
- 10.2.2. Test insects
 - 10.2.3. Microbial strains
 - 10.3. Antifeedant activity of *Amaranthus viridis* to Lepidopteran pests
 - 10.4. *Amaranthus viridis* effects on insect growth
 - 10.5. Fumigation activity of *Amaranthus viridis* stored pests
 - 10.6. Antibacterial activity of the *Amaranthus viridis* leaf extract
 - 10.7. Conclusion
 - 10.8. References

Chapter 11. Bioactivity of *Alstonia boonei* De Wild Leaf Alkaloid on the Growth and Development of *Maruca vitrata* Fabricius.

O. Nathaniel Oigiangbe, M. Tamo and I. Benjamin Igbinsosa O. Nathaniel Oigiangbe, M. Tamo and I. Benjamin Igbinsosa

Abstract

Keywords

11.1. Introduction

- 11.1.1. Legume pod borers

- 11.1.2. *Maruca vitrata* management

- 11.1.3. *Alstonia boonei*

- 11.1.4. Objective

11.2.1. Processing of Plant materials

- 11.2.2. Incorporation of alkaloids

- 11.2.3. Data Analysis

11.3.1. Larval survival

- 11.3.2. Growth and development

11.4. Conclusion and Future focus

11.5. References

Chapter 12. Insecticidal activity of the *Murraya paniculata*

Yan ping Luo

Abstract

Keywords

12.1 Introduction

12.2 Preparation of *M. paniculata* extract

- 12.2.1 Materials and Methods

12.2.1.1 Materials

- 12.2.1.2 Preparation of *M. paniculata* crude extract

- 12.2.1.2.1 Percolation method

- 12.2.1.2.2 Ultrasonic extraction method

- 12.2.1.2.3 Reflux extraction method

- 12.2.1.2.4 Soxhlet extraction method

- 12.2.1.2.5 Supercritical CO₂ extraction method

- 12.2.1.3 Preparation of *M. paniculata* extract

- 12.2.1.3.1 Petroleum ether extract

- 12.2.1.3.2 Chloroform extract

- 12.2.1.3.3 Ethyl acetate extract

- 12.2.1.3.4 n-Butyl alcohol extract

- 12.2.1.4 Preparation of *M. paniculata* chromatography fraction

12.2.2 Results and Discussion

12.2.2.1 Extraction methods of *M. paniculata*

12.2.2.2 *M. paniculata* extract

12.2.2.3 *M. paniculata* chromatography fractions

12.3 Insecticidal activity of *M. paniculata*

12.3.1 Materials and Methods

12.3.1.1 Testing insects

12.3.1.2 Test agent and equipment

12.3.1.3 Determination of contact activity of the *M. paniculata* extract against *Musca domestica*

12.3.1.4 Determination of contact activity of *M. paniculata* extract against Radish aphids

12.3.1.5 Determination of contact activity of the *M. paniculata* extract against *Predenia litur*

12.3.1.6 Determination of insecticidal activity of *M. paniculata* extracts against *Brontispa longissima*

12.3.2 Results and Discussion

12.3.2.1 Contact activity of *M. paniculata* extracts against housefly

12.3.2.2 Contact activity of *M. paniculata* extracts against *L.erysimi*

12.3.2.3 Contact activity of *M. paniculata* extracts against *P. litur*

12.3.2.4 Insecticidal activities of *M. paniculata* against *B. longissima*

12.3.2.5 Determination of the toxicity of chloroform extract on pests

12.3.2.6 Insecticidal activity of chromatographic fractions from the chloroform extract

12.3.2.7 Field test of total flavonoids from *M. paniculata*

12.3.3 Discussion

12.3.4 Acknowledgments

Chapter 13. Fumigant toxicity of limonene and linalool for pulse beetle, *Callosobruchus chinensis* (L.) management

M. Moshrefi, K. Ahmadi, A. Purhematy, F. Sharififar

Abstract

Keywords

13.1. Introduction

12.1.1. Synthetic insecticides and their consequences

12.1.2. Aromatic plants in pest control

12.1.3. *Callosobruchus chinensis*

12.1.4. 12.1.4. Limonene / Linalool in pest control

13.2. Materials and Methods

12.2.1. Insect rearing

12.2.2. Fumigant Bioassay

12.2.3. Statistical analysis

12.3. Results and discussion:

12.3. 1. Fumigant toxicity for limonene and linalool

12.4. Conclusion

12.5. Reference

Section C: Natural Enemies

Chapter 14. *Cryptolaemus montrouzieri* Mulsant –an important predator of mealybugs S.G. Dumaniya, M.R. Siddhapara and I.B. Kapadiya

Abstract

Keywords

14.1. Introduction

14.1.1. Mealybugs

14.1.2. Host plants of Mealybug

14.1.3. Biology of Mealybug

14.1.4. Mode of transport of mealybug

14.1.5. Why Biological control?

14.1.6. *Cryptolaemus montrouzieri* Mulsant for mealybug management

14.2. Methodology followed

14.2.1. Biology of *C. montrouzieri*

14.2.1.1. Maintenance of *C. montrouzieri* on *P. solenopsis*

14.2.1.2. Observations

14.2.2. Predatory potential of *C. montrouzieri*

14.3. Results and discussion

14.3.1. Biology of *C. montrouzieri*

14.3.1.1. Eggs

14.3.1.2. Larva

14.3.1.3. Pupa

14.3.1.4. Adults

14.3.2. Predatory potential of *C. montrouzieri*

14.3.2.1. Larva

14.3.2.2. Adult

14.4. Use of *C. montrouzieri* as biocontrol agent

14.5. Natural enemies of *C. montrouzieri*

14.6. Interaction of *C. montrouzieri* with parasitoids and other natural enemies

14.7. Conclusions

14.8. Reference

Chapter 15. Studies on egg parasitoids of *Helopeltis* spp. (Hemiptera: Miridae) K.K. Srikumar¹, P.S. Bhat, T.N. Raviprasad, K. Rajmohana and K. Vanitha

Abstract

Keywords

15.1. Introduction

15.1.1. Tea mosquito bug (TMB) (*Helopeltis* spp.)

15.1.2. *Helopeltis* spp. In cashew

15.1.3. Management practice

15.1.3.1. Predator

15.1.3.2. Parasitoid

15.1.3.3. Pathogens

15.1.3.4. Use of botanicals

15.1.3.5. Use of sex pheromone

15.1.4. Objectives

- 15.2. Distribution
 - 15.2.1. Survey
 - 15.2.2. Abiotic factors recorded
 - 15.2.3. Egg parasitoids population
 - 15.2.4.. Parasitism and cropping seasons
- 15.3. Laboratory experimenters
 - 15.3.1. Behaviours of *Telenomus* sp.
 - 15.3.2. Biological traits
- 15.4. References

Chapter 16. *Zygogramma bicolorata* Pallister- A potential bio agent of *Parthenium hysterophorus* L.

M.R. Siddhapara, I.B. Kapadiya and J.R. Talaviya

Abstract

Keywords

16.1. Introduction

- 16.1.1. Weed Plants in India
- 16.1.2. *Parthenium hysterophorus* a nocuous weed
- 16.1.3. Biological Control over *Parthenium hysterophorus*
- 16.1.4. Current status of distribution and Impact of *Z. bicolorata* in India
- 16.1.5. Host range of *Z. bicolorata*

16.2. Biology of *Zygogramma bicolorata* Pallister

- 16.2.1. Maintenance of *Z. bicolorata* on *P. hysterophorus*
- 16.2.2. Experimentation
 - 16.2.2.1. Egg
 - 16.2.2.2. Larva
 - 16.2.2.3. Pupa
 - 16.2.2.4. Adult

16.3. Bioefficacy

- 16.3.1. Evaluation of feeding Potential of *Z. bicolorata*
- 16.3.2. Observation of Feeding potential of *Z. bicolorata* on *P. hysterophorus*

16.4. Can *Z. bicolorata* harmful to other crops?

16.5. How many beetles should be released?

16.6. Conclusions

16.7. References

Chapter 17. Economics of Cabbage Production in Riyom Local Government Area of Plateau State, Nigeria

S.A. Jibril, H.A. Bala, M. Buenkwap and S. Abdullahi

Abstract

Keywords

17.1. Introduction

- 17.1.1. Cabbage (*Brassica Oleracea*)
- 17.1.2. Cabbage production
- 17.1.3. Economics of cabbage production

17.2. Methodology

- 17.2.1. Study area and climatic conditions
- 17.2.2. Observations

-
- 17.2.3. Statistical analysis
 - 17.3. Results and Discussion
 - 17.3.1. Socio-economic characteristics of cabbage producers
 - 17.3.2. Costs and returns associated with cabbage production
 - 17.3.3. Multiple regression analysis
 - 17.3.4. Constraints to cabbage production
 - 17.4. Conclusion
 - 17.5. References

Chapter 18. Biopesticides and Botanical Insecticides Application, Sudan

Maymoona A. Eisa, and Wail M. Haroon

Abstract

Keywords

- 18.1. Introduction
- 18.2. Pesticides and their consequences
 - 15.2.2. Botanical biopesticides
 - 15.2.3. Contribution of Metarhizium
- 18.3. Methods adapted
- 18.4. Results and discussion
- 18.5. Conclusion and future directions
- 18.6. References

Chapter 19. Integrated Disease Management of Fusarium wilt of chickpea with biopesticides

Y.S. Mailem, Bharati N. Bhat and V. Krishna Rao

Abstract

Keywords

- 19.1. Introduction
 - 19.1.1. Chickpea in world and also in India
 - 19.1.2. Phytopathogens in Chickpea
 - 19.1.3. Fusarium wilt in Chickpea
 - 19.1.4. Biological control of phytopathogens
 - 19.1.5. Aim of the study
- 19.2. Evaluation of seed dressing fungicides
- 19.3. Evaluation with botanicals
- 19.4. Evaluation with biocontrol agents
 - 19.4.1. Antagonistic activity
- 19.5. Management studies under glass house conditions
 - 19.5.1. Wilt incidence
- 19.6 Conclusion
- 19.7. References

Section D: Bionanomaterials and Innovative Methods

Chapter 20. Synthesis, Characterization and applications of bionanomaterials with spherical reference to pest management

Badal Kumar Mandal and H A Kiran Kumar

Abstract

Keywords

20.1. Introduction

20.1.1. Synthesis of bionanomaterials

20.2. Characterization of nanoparticles

20.2.1. UV – Vis spectroscopy

20.2.1.1. Principle

20.2.1.2. Application in bionanomaterials characterization

20.2.2. Transmission electron microscopy

20.2.2. 1. Components of TEM

20.2.2. 2. Applications

20.2.3. Scanning electron microscopy

20.2.3.1. Components

20.2.3. 2. Applications

20.2.3. 3. Applications of SEM in bionanomaterials characterization

20.2.4. Atomic force microscopy

20.2.5. X – Ray diffraction (powder/single crystal)

20.2.5. 1. XRD - powder diffraction

20.2.5. 2. XRD - powder diffraction

20.2.6. Fourier transformed infrared spectroscopy

20.2.7. Particle size analysis

20.2.8. X – Ray photoelectron spectroscopy

20.3. General Applications

20.3. 1. Nanopesticides

20.3. 2. Validamycin

20.3. 3. Polyethylene glycol-coated nanoparticles for pest management

20.3. 4. Metallic Nanoparticles for pest management

20.4. Conclusions

20.5. References

Chapter 21. Pesticidal-bioassay for bio-nanomaterials

K. Sahayaraj

Abstract

Keywords

21.1. Introduction

21.1.1. What type of plants can be utilized for pest management?

21.1.2. Plant collection

21.1.3. Extraction

21.2. Biogenesis of nanomaterials

21.3. Characterization of silver nanoparticles

-
- 21.3. 1. UV-Vis spectroscopy analysis
 - 21.3. 2. Size and shape of Bio-NPs were done using TEM and SEM analysis.
 - 21.3.3. FT-IR vibration
 - 21.3.4. XRD measurement
 - 21.4. Nano-materials in pest management
 - 21.5. Bioassay methods
 - 21.5.1. Collection and Maintenance of species of Pests
 - 21.5.2. Walking Activity Bioassay
 - 21.5.3. Deterrent activity using olfactometer
 - 21.5.4. Antifeedant activity
 - 21.5.5. Leaf-dip method
 - 21.5.6. Insect cell line bio-assay
 - 21.5.7. Micro-Injection Bioassay
 - 21.5.8. By artificial diets for sucking type of mothparts
 - 21.5.9. Direct contact bioassay
 - 21.5.10. Oviposition Choice Tests in Laboratory
 - 21.5. 11. Ovicidal activity
 - 21.6. Statistical evaluation
 - 21.7. Advantages and disadvantages
 - 21.8 References

Chapter 22. Designing Nanomaterials and Nanocomposites for the Management of Weeds and Herbicide Residue

C.R.Chinnamuthu

Abstract

Keywords

22.1. Introduction

22.1.1. Existing management options of weeds

22.1.1.1. Manual method

22.1.1.2. Mechanical method

22.1.1.3. Chemical method

22.2. Application of Nanotechnology to manage problem weeds

22.3. Nano-herbicides to exhaust the weed seed bank

22.4. Nano-herbicides to eradicate the perennial weed

22.5. Developing nanoherbicides molecule targeting the new domain

22.6. Developing smart delivery mechanism to the targeted site

22.7. Nanoherbicides for rainfed Agriculture

22.8. Nanoherbicides for season long weed control.

22.9. Detoxification herbicide residue

22.10. Synthesis of Template for Loading Herbicide Active Ingredient for Control

22.11. Procedure

22.12. Future focus

22.13. Conclusion

22.14. References

Chapter 23. Agro nanomaterials: past and present scenarios

T. Seenivasagan and K. Sahayaraj

Abstract

Keywords

24.1. Nanomaterials

24.2. Nanomaterials Pesticides determination

24.3. Pesticides absorption / destruction

24.4. Controlled release of Pesticide delivery

24.5. Crop Growth Induction

24.6. Pestiferous insect's management

24.7. Post-harvest pest management

24.8. Nanocomposites

24.9. Conclusions

24.10. References

Chapter 24. Changing scenario of insect pests and research priority on pest management in Cotton

Murugesan, N. and K. Elanchezhyan

Abstract

Keywords

24.1. Introduction

24.2. Pre Transgenic Cotton (Bt cotton) Era

24.3. Adoptable Srivilliputtur IPM module (ASIPM)- Components

24.4. Post Transgenic Cotton (Bt cotton) Era

2.5. Conclusion

2.6. References
