

Aims and Scope

Science, Religion and Culture (SRC) is an open access interdisciplinary journal focused on bringing together research and theoretical analysis from the physical, biological, and social sciences with ideas from philosophy, theology, and religious studies. It aims at exploring the unique relationship between science, religion, and culture, and it welcomes submissions from all perspectives and religious traditions—including Christianity, Judaism, Islam, Buddhism, Hinduism, Taoism, secularism, humanism, and naturalism. Given that science and religion are two great manifestations of human culture, special focus is given to the various ways modern science (including the disciplines of physics, cosmology, biology, psychology, neuroscience, mathematics, sociology, and anthropology) support, oppose, inform, or are informed by religious, theological, and cultural beliefs. Additional focus is given to perspectives on science, religion, and culture from different geographical regions, cultures, religions, and historical epochs.
