

<Document Generator Class [RTF PDF]>

Document Generator Class is aiming to unify the generation of the printable documents using the common file formats - RTF and PDF. There are a lot of situations, when there is a need of some application which could form certain information in a format, which could be easily downloaded from internet server and then opened, printed or saved by any internet user, and this class can help the owners of various web services to accommodate this need.

This script is written in PHP and uses no additional components (plugins or else). Only if you are planning to generate documents in different character sets - you will need to make sure that 'mbstring' extension. The script works on Unix or Win32 platforms and require only PHP 4.x.x (or later) installed. As there is no plugins required for the script to work, it could be easily installed on server, or even be used in a local network to create some reports, or anything else.

The script uses special markup language, based on XML rules. The language is very flexible and allow to create perfect-looking documents as there are a lot of options available to control document look.

Document Generator Class features:

- Generate customized contracts, agreements, bills of sales using client provided information. Save huge amount of time on document preparation. The document is totally generated within a split second using the dynamic data.
- The client does not need to know that a document has been generated "on the fly". If you are preparing any type of documentation for your clients, this script can automate the production of the documents. You can generate any kinds of reports from databases, or any other source.
- Any other usage that you can imagine.

The Generator has a lot of useful features, and more than a half of them were added upon the requests of the scrip users. You can ask for some special feature and I'll try to insert it a soon as possible. Also, you'll get all the updates for free - you should only ask for them (visit my site often to check the script news).

The script cost is:

<i>American dollars</i>	\$68.00
<i>Euro</i>	51.00 €

The information about ordering the script is given on my site: <http://paggard.com/projects/doc.generator/toorder.php>. If you will have any questions - you can always contact me by email.

The main features of the Generator are listed on the next page...
[click here to go](#)

Here is the list of some main Generator features

(the list is not full)

- All kind of tables, with all kind of borders, with the possibility of filling table cells. Colspans and rowspans and all necessary formatting. Nested tables are also supported;
- Embedded .JPG .PNG images with full control over their layout;
- Multi-page support: document sections, pagebreaks, page orientation, page numbers, document headers and footers;
- Total font control: **bold**, *italic*, underline, font **size**, font **face**, font **color**, ^{superscript} and _{subscript};
- Paragraph control: alignment, indentation etc;
- Bullets and symbols;
- Hyperlinks within and outside the document;
- Footnotes;

Below are some tables examples:

First cell	
next cells	another one

Table borders:

First cell	
next cells	another one

Nested Tables:
